Leg and
Facial Veins

.....

Now you see
them, now
you don't.

Remove leg
and facial veins
with cosmetic
laser treatment.

CYNOSURE

Leg and Facial Veins

They're quite the nuisance,
aren't they?

Leg and facial veins are bothersome at best, unattractive at worst. Fortunately, with cosmetic laser treatment, you can make yourself look and feel a whole lot better—often times, with as little as only one or two visits.

What causes unwanted veins?

Red, blue or purple leg and facial veins can be a result of sun exposure, use of oral contraception, hormone therapy, age or genetics.

How does laser treatment work?

A cosmetic laser emits a prescribed dose of energy to the vein. The laser “selectively” targets the problem veins while sparing surrounding areas. After treatment, the vessel will naturally disappear.

How many treatments are required?

Typically only one or two treatments are required and results can be seen in 3–4 weeks. Treatment time usually varies between 10 and 20 minutes, depending on the size of the area treated.

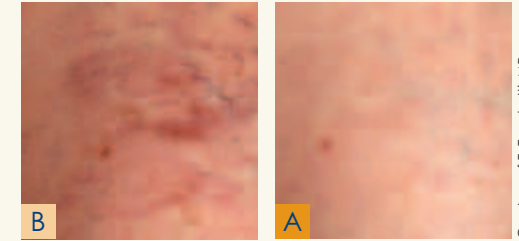

Does it hurt?

The treatment causes only minimal discomfort. Any redness or swelling should be gone within a day and you'll be able to resume normal activities immediately.
